Dear Quora Recruiting Team,

I'm reaching out regarding your posted need for an Engineer at Quora as I believe my skills, background and education nicely suit your requirements. I hold a bachelor's degree in Computer Science and have two years experience working as a software engineer for a Fortune 500 client while an employee with the Capgemini consulting firm.

On one of my core recent projects, I used TypeScript and Vue to develop a responsive web UI to enable a centralized hub, connecting web-scraper data farming and user uploaded data for research and thought organization. Additionally, parts of the core backend technologies of the project, Redis and PostgreSQL, align nicely with your requirements.

Unrelated to fullstack, I have written extensively in Python and Java for years developing myriad personal projects and tools. These range from conducting real-time Apache Kafka and Spark analysis, to React Next.js sites, to a PyTorch AI Art critic.

Beyond technical expertise, I pride myself on project ownership, as demonstrated while working for Capgemini. My skills in TypeScript, Vue, and React, and commitment to my team make me a strong fit for Quora. I'd love to explore how my background can contribute to your team's success.

I'm excited about the opportunity with Quora and look forward to further discussing the position and how I might fit into your team.

Sincerely ,

Dylan Trinkner
